**Resident Engineer**  
To be determined

**Affected  
Legislative Districts:**  
**Senate:** 2, 3, 7  
**House:** 31

**Affected  
Municipalities:**  
South Salt Lake,  
Salt Lake City

### **Project Description: Study & Design, Roadway and Structure Rehabilitation**

A state study is now underway to determine the best way to renovate I-80 within its present right-of-way from State Street to 1300 East, in order to improve safety and traffic flow and make the freeway work better. The study will identify existing conditions, potential solutions and possible alternatives for the corridor.

At this time approximately \$45 million has been earmarked for the entire project, study through construction. The actual environmental study will utilize only a very small portion of those funds. At its current funding level, this project is not intended to be the final solution in addressing all of the concerns regarding this busy corridor.

NOTE: Schedule information listed above is estimated and could change without notice based on funding, scheduling constraints, stakeholder issues, and other unanticipated project elements.
